EDUCATION AND TRAINING

BSc

Marmara University, Computer Engineering, 3.06 [10/2017 – 06/2020]

ASc

Marmara University, Computer Programming, 3.59 [09/2015 – 06/2017]

WORK EXPERIENCE

Research Student

Marmara University [03/2019 – 05/2020]

- I worked as research student in Tübitak 3001 Project. I was responsible of data collection and implementation of machine learning algorithms.

Intern

VeriUS Technology [07/2019 – 08/2019]

- Implementation of the machine learning algorithms for the Tubitak 3001 Project is performed during this internship.

Intern

Neo Tasarım [07/2017 – 08/2017]

- Designed a web application which allows the user to analyze customer's purchasing habits.
- Google Analytics, Django and MySQL are used.

PROJECTS

Social Network Opinion Leaders (TUBITAK 3001)

[03/2019 – 05/2020]

- This research project aims to analyze and identify topic-based opinion leaders based on their posts on Twitter.
- MongoDB and Solr are used for data storage and indexing, respectively.
- Scikit-Learn and PySpark are used to implement machine learning algorithms.

A survey on Dimension Reduction and Text Classification Methods

- Feature selection and extraction methods are implemented using Scikit-Learn.
- Experiments are conducted by using Support Vechor Machine and Naïve Bayes algorithms.

Twitter Spam Detection (Intro. to Data Science and Analytics Course Project)

- A system is designed to detect spammers on Twitter.
- Several feature selection methods are implemented to reduce the dimension of the data set.
- MongoDB is used as data storage and Scikit-Learn is used to create the models.

Descriptive Analysis of E-Commerce Data Set (Fundamentals of Data Mining)

- Clustering algorithms such as k-means, Agglomerative Clustering, and DBSCAN are utilized to detect hidden patterns in the data set.
- The features are normalized with different approaches.

Banking System (Database Design Project)

- Developed a web application which allows the users to perform CRUD operations with customer data.
- MSSQL and React are used for data storage and front-end, respectively.

KondoKHR Web Application (Comp. Programming Graduation Project)

- Developed a web application to control KondoKHR humanoid robot via Raspberry Pi 3 as controller. Additional functionalities are implemented in C.
- Flask and JQuery is used for web server and front-end, respectively.

PUBLICATIONS

From Past to Present: Spam Detection and Identifying Opinion Leaders in Social Networks

International Journal of Innovative Science, Engineering & Technology, Vol. 7 Issue 6, June 2020

TECHNICAL SKILLS

Libraries

- Pandas, Numpy, Scikit-Learn, Tensorflow, PyTorch, Networkx, Flask, NLTK, PyMongo, PySpark, ZemberekNLP,

Interests

- Data Cleaning/Mining/Visualization, Probability and Statistics, Natural Language Processing, Deep Learning

Programming Languages

- Python, Java, R, C, C#

Database

- MongoDB, MSSQL, MySQL, SQLite
