Summary

Data Scientist and **Python Instructor** with **2+ years of experience** delivering high-impact data solutions and learning products. Increased programming course engagement by developing SQLite-based educational software used by **1500+ students worldwide**. Improved Python project efficiency by up to **80%** through targeted debugging and optimization. Skilled in data preprocessing, model evaluation, and visualization using **Python, Pandas, NumPy, Seaborn and Matplotlib**. Adept at building machine learning models, interactive applications, and analytics tools that drive measurable results. Interested in not only education, but also business and technical domains, and looking to gain experience as such.

Experience

Python Instructor

Algorithmics **2023 - 2025**

Developed and deployed SQLite-based educational software adopted in multiple courses, increasing student project completion rates by approx. **50%**.
Conducted performance analysis with **NumPy, Pandas, and Matplotlib**, delivering insights to improve curriculum tools.
Delivered programming courses to **200+ students**, combining technical instruction with hands-on projects.
Designed and supervised **capstone projects**, enabling students to apply machine learning, data analysis, and problem-solving skills in real-world scenarios.

Projects

Data Science Internship Projects - Prodigy Infotech & CodeAlpha

Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn **2025**

Sentiment Analysis of Brands on Social Media: Filtered automated bot accounts from scraped social media data and conducted sentiment analysis on mentions of gaming, console, technology, and retail companies. Visualized sentiment distributions and extracted insights on brand perception trends.
Bank Client Service Purchase Prediction: Worked with a large structured dataset containing socio-economic and behavioral information of bank clients. Built and trained a Decision Tree Classifier to predict the likelihood of clients purchasing bank services. Performed data preprocessing, model training, and evaluation to assess predictive performance.
Population Growth Analysis of Countries: Analyzed international population datasets to study trends in population growth across countries. Created visualizations and statistical summaries to identify patterns and demographic insights.

Housing Prices Prediction ML Model - Kaggle

Python, Scikit-learn, Pandas **2025**

Built and evaluated machine learning models in **Python** to predict housing prices using structured tabular data.
Initially implemented a **Decision Tree Regressor (Mean Absolute Error: 21,218)**, then improved performance by **15.8% (MAE reduced to 17,860)** through feature engineering and switching to a **Random Forest Regressor**.
Gained hands-on experience in model selection, evaluation, and iterative refinement.

Streamlit + Gemini Roadmap Creator

Python, Streamlit, Gemini API **2025**

Designed and implemented an interactive web application that generates personalized learning roadmaps based on user inputs.
Integrated the **Gemini API** to enhance content generation and roadmap customization.
Specially tailored a custom-prompt to be fed into the Gemini API, and created a **session system** to store user info.
Built a responsive **Streamlit interface** enabling real-time roadmap creation, content recommendations, and fallback to human support when needed.
Optimized performance for quick prototype delivery **under a 3-day development deadline**.

Education

Bachelor's in Computer Engineering

Celal Bayar University **2020 - 2024**

Graduated with a GPA of 3.14/4.00. Took classes on computer science, statistics, mathematics, algorithms

Skills

Technical Skills

Programming and Query Languages - Python, SQLite, PostgreSQL, C#
Data Science Libraries and Frameworks - Pandas, NumPy, Scikit-learn, Matplotlib, Flask, Seaborn, Tensorflow
Tools & Environments - Jupyter Notebook, Git, Visual Studio Code
Machine Learning & Statistical Techniques - EDA (Exploratory Data Analysis), Data Preprocessing, Model Evaluation

Certifications

Coderspace : Front-end Programming CSS, HTML
Kaggle : Intro to Machine Learning, Pandas
Coursera : Python for Data Visualization: Matplotlib & Seaborn
Huawei: HCCDA - AI (Huawei Certified Cloud Developer Associate - AI)
BTK Akademi : Python & Tensorflow for Data Science, Network Technologies Basics

Language Skills

Turkish - Native
English - C2
German - A1
