Zeynep Aksun | Software Developer

Highly motivated and technically skilled software developer with a strong interest in data science and analytics. Focused on contributing to impactful, data-driven projects that solve real-world problems. Seeking opportunities to apply and deepen my skills in software engineering, data analysis, and problem-solving within an innovative and collaborative environment.

EXPERIENCE

Software Engineer

Working within the product team, focusing on feature development and system integration using modern tools and frameworks. Contribute to planning, implementation, and continuous improvement of core applications.

Pulpoar, *June 2024 – Present*

General Trainee

Completed a cross-functional training program, gaining exposure to various teams and workflows. Took ownership of individual projects within technical and product-focused teams, developing practical skills and contributing to team goals.

Pulpoar, *April 2024 – June 2024*

Software Developer Intern

Developing responsive mobile apps using React Native with TypeScript.

Pulpolabs, *October 2023- June 2024*

Software Developer

Currently performing web scraping as part of ongoing work, targeting platforms like Web Summit to collect and structure data on investors and startups. Utilizing Python (Beautiful Soup), Octoparse, and Power Automate to automate and optimize the data extraction process. Over 1,000 entries gathered and continuing to expand.

Freelance, *October 2023- Present*

PROJECTS

Graduation Project – Developer (Team Leader)

Led the development of a React Native language learning app with integrated object recognition and audio support. Fully handled the frontend implementation and significantly improved the detection models. Also coordinated team efforts and contributed to project planning.

Predictive Modeling of Diabetes Dataset (Python)

Implemented methodologies to tackle high-scale dimensionality challenges, ensuring effective analysis of the diabetes dataset. Utilized logistic regression for predictive modeling, emphasizing performance optimization. Collaborated on data cleaning and preprocessing to enhance model efficiency and accuracy.

Sentiment Analysis with VADER (Python)

Analyzed sentiment in Amazon customer reviews using the VADER model from NLTK. Applied NLP techniques like tokenization, stopword removal, and lemmatization for preprocessing. Visualized sentiment trends using Matplotlib, presenting insightful findings and distributions.

Unveiling Consumer Trends through Market Basket Analysis with Apriori (Python)

Leveraged the Apriori algorithm on transaction data to reveal frequent itemsets and association rules. Used NumPy, Pandas, and Apyori for data processing, along with Matplotlib and WordCloud for clear visual representation.

EDUCATIONAL PROGRAMS

Sponsorship & Organization Core Team Member
Google Developer Student Clubs
September 2024 - January 2025

Womentum Educational Program
Enerjisa Üretim & imeceLAB
March 2024 - May 2024

HERDataCamp (Data Science & Machine Learning)
Miuul
March 2024 - May 2024

SKILLS

Programming Languages: Python (Intermediate), JavaScript (Intermediate), C++ (Beginner), C(Beginner), SQL (Beginner), Java (Beginner)

Web Development: HTML (Intermediate), CSS (Intermediate)

Database Management: PostgreSQL

Frameworks and Libraries: React Native, React, Flask, Bootstrap

Data Analysis and Visualization: Pandas, Matplotlib

Agile Methodologies: Kanban, Sprint

Problem Solving: Algorithmic thinking, debugging

Soft Skills: Collaborative and adaptable in team environments, Strong verbal and written communication skills

LANGUAGES

Turkish (Native) / English (Fluent)

EDUCATION

Bachelor of Science in Software Development

Istanbul Aydin University, Istanbul, Turkey
September 2021- July 2025
