PROJECTS

Super Resolution for Two-photon Laser Scanning Microscopy Imaging

In this specific and advanced senior project, our main goal was denoising and enhancing the quality and resolution of two-photon microscopy images. Our data is provided by Zurich Brain Research Institute(University of Zurich - HiFo). We proposed an algorithm that contains mainly two parts: Denoising and Super Resolution. Denoising part consists of some state-of-the-art noise-reduction filters and some deep learning based artificial intelligence methods.

Super resolution part contains a specific iterative super resolution algorithm that minimizes the error where the result is the best according to former results.

Nowadays, we also prepare for a journal article to be published in an international scientific journal which has a respectable impact score and reputation.

COURSES

Digital Image Processing (CE490)

Machine Learning (CE475)

Database Systems (CE223)

Digital Signal Processing (EEE413)

Java Programming I & II

Principles of Macroeconomics (ECON102)

Introduction to Business (GEEC201)

ERP with SAP (IE376)

Numeric Analysis (SE366)
