Abdulkadir Karaca

Computer Engineer (M.Sc.)

akadirkaraca13@gmail.com +90 (530) 110 7093 abdulkadir-karaca akadirkaraca

Istanbul/TURKEY Military Service: *Done*

About Me

I am a curious, diligent, innovative and self-motivated person with a strong team spirit. I keep up with cutting-edge technologies in computer science. I am keen on learning new skills regarding computer science and technology.

Skills

• Python • C++ • TensorFlow • Keras • OpenCV • PyTorch • SQL

• Docker • Linux • ML/Deep Learning • Git

Experiences

Computer Vision Engineer (Çözüm Makina) ***August 2023 - Present***

Developing core modules and tools—including tracking systems, databases, and anomaly detection—to enhance our solutions. Contributing to R&D efforts and building runtime and testing environments for deploying products on edge devices. Currently focused on an autonomous forklift project.

Technologies: Python, C++, PyTorch, TensorRT, OpenCV, Ubuntu, Object Detection, Tracker, NoSQL, MQTT, Git

National Service (Reserved Engineer Officer) ***Oct. 2021 - Oct. 2022***

AI/ML Researcher – Academic Research ***Oct. 2018 - Oct. 2021***

I have gained theoretical and practical knowledge regarding especially machine learning and deep learning etc. I improved myself in terms of academic research, industries, cultural and social. I published a paper about NLP and Transformer Architecture in an SCI-Expanded journal.

Technologies: Python, TensorFlow, Keras, Scikit-Learn, Pandas, NumPy, Matplotlib, RegEx, OOP, NLP, Transformer

Educations

Master of Science : Trakya University, Computer Engineering, *GPA (85/100)* ***Jan. 2018 - March 2021***

Bachelor of Science : Trakya University, Computer Engineering, *GPA (3.57/4)* ***Sep. 2012 - Oct. 2016***

Language

Turkish *(Native)* English *(Conversational)*

Projects

Generating Headlines for Turkish News with Transformer (*GitHub*)

By using the news texts and headlines in the SuDer news corpus, it is aimed to produce headlines suitable for these news. Modeled using LSTM, GRU and Transformers that is state-of-the-art NLP architectures separately. I implemented Transformer architecture and I achieved reasoning accuracy according to other architectures and studies.

Technologies: Python, TensorFlow, Keras, Scikit-Learn, Pandas, NumPy, Matplotlib, RegEx, OOP, NLP, Transformer

Hiding Data Into Picture Using RGB Color Channels *(GitHub)*

By using the RGB color channels of the images, it was studied to hide the text data in the last bit of the color channels. C# programming language was used. I developed efficient and fast technique according to other exist methods.

Technologies: Python, C++, Qt, OOP, Image Processing, Algorithm

Publications

SCI-SSCI or SCI Expanded Articles

• Karaca, A. & Aydin, O. (2023). Generating headlines for Turkish news texts with transformer architecture based deep learning method, Journal of the Faculty of Engineering and Architecture of Gazi University, 39(1), 485-496. https://doi.org/10.17341/gazimmfd.963240

Courses & Certificates

• TensorFlow Developer Certificate (Google – *Certificate ID: 87923358*) ***Dec. 2023***

• Google Developers Machine Learning Bootcamp (Inzva & Google Developers) ***May - Dec. 2023***

• Deep Learning Specialization Certificate (Coursera & DeepLearning.AI – *Certificate*) ***August 2023***
