SKILLS

- **Python**(Numpy, Pandas, Keras, Scikit-learn, Tensorflow)
- **TypeScript,JavaScript, HTML & CSS**(Intermediate)
- **Java**

Development & Design Tools: Jetbrains IDEs, Eclipse, VS Code)

- **Flutter**
- **Spring**(Intermediate)
- **RDBMS: Postgresql**

LANGUAGES

- English - B1
- Turkish - Native

PROFILE

I am passionate about building efficient and user-focused software solutions. I bring hands-on experience in both backend (Python, Spring Boot) and frontend (TypeScript, Flutter) technologies, gained through collaborative projects and internships. I am a proactive team player who adapts quickly, communicates effectively, and enjoys taking responsibility in dynamic development environments.

WORK EXPERIENCE

TÜBİTAK BİLGEM YTE JUNE-AGUST 2024

software development internship

Collaborated on a full-stack web project within a 5-person team. We designed and developed a personnel management system from scratch. I contributed to both backend and frontend:

• Backend: Java & Spring Boot

• Frontend: TypeScript

I was actively involved in the architecture design, REST API development, and UI creation. Throughout the internship, I improved my understanding of teamwork, version control, and deployment workflows.Even though my internship period was over, I worked at the internship for 2 more days to complete the project.

MY PROJECTS

MaviRota

Artificial intelligence supported boat rental application

- I developed a mobile application for yacht and boat rentals that includes both standard reservation features and advanced AI functionalities. I trained a custom image classification model using a dataset of boat photos, allowing users to identify the type of boat by selecting an image from their gallery. The app also enables voice-based boat filtering in five different languages using OpenAI's Whisper library. Communication between the frontend and backend was handled via RESTful APIs, with PostgreSQL used for database operations. Additionally, I integrated Stripe to simulate the prepayment process for selected boat rentals.

Clothes Guru

application of clothing combination

- Users enter the application and enter text or visual data to get suggestions for clothing combinations. I created 2 agents by CrewAI. One of the agents collects current combination information, while the other summarizes the clothing combination in a narrative style that will not boreter the application and enter text or visual data to suggestions for clothing combinations

I created 2 agents by CrewAI. One of the agents collects current combination information, while the other summarizes the clothing combination in a narrative style that will not bore the users. In the text section, I was able to send all mbination to the user.

Participation control with QR

- Developed a replica of a university attendance system where instructors can generate QR codes for each class session via a web interface. Students scan the QR code using a mobile application; if they are enrolled in the course, their attendance is recorded automatically, otherwise, an error message is displayed. The system also allows students to view or delete records of their previously attended classes.

EDUCATION

Computer Engineer(**scholarship**) (3.01/4) , Biruni University, Türkiye
2021 - 2025

additional information

- I attended the Technology Summits organized every year at **Istanbul Technical University**. Here, I had the opportunity to meet and listen to people such as **Google game and application academy** finalists, **T3 foundation** board members and **Selçuk Bayraktar**.

CERTIFICATES

PYTHON 2023 : 100 DAY PROGRAMMING CAMP
Tkinter, Pandas, MAtplotlib, django, selenium libraries were a very productive course that I progressed by doing small projects.

INTRODUCTION TO PROGRAMMING WITH JAVA
Object-Oriented Programming

A2 LEVEL English

BEGINNER LEVEL ENGLISH (A1)

ANDROID MOBILE APPLICATION COURSE: KOTLIN & JAVA
