Education

FMV Işık University | 2020 October - 2025 June

Bachelor of Science in Computer Engineering

GPA: 2.90

Ecole-42 (42 Istanbul) | 2023 October - Present

Common Core Student | Developed skills in C programming basics, algorithms, data structures, Unix system programming, Object-Oriented Programming (C++), network and system administration, graphics, and web technologies.

Istanbul Uskudar High School | 2014 - 2018

Experience

AI Engineer Intern - Ayvos | 2025 January

- Developed and implemented Retrieval-Augmented Generation (RAG) systems for PDF analysis using LLaMa3.1:8B, LangChain, and LangGraph.
- Engineered a Python algorithm for OCR-scanned receipt processing, transforming JSON output into readable text.
- Applied Prompt Engineering to optimize LLM outputs for accurate data extraction from processed OCR text.
- Explored and implemented Tool Calling concepts, integrating LLMs with external APIs for automated tasks.
- Designed an automated system using LangChain to detect emails in PDFs via RAG and send automated emails.
- Gained practical experience in local LLM deployment, focusing on hardware optimization and performance.

AI Research Engineer Intern - Huawei R&D Center | 2024 July

- Studied the architecture and operation of Transformer models (GPT, BERT, T5, etc.).
- Learned training and fine-tuning techniques for Large Language Models (LLMs) and LoRA.
- Explored advanced NLP concepts such as tokenization, word embeddings, and attention mechanisms.
- Developed a mini GPT model from scratch using Python, Numpy, and TensorFlow.
- Participated in the development of a Recommendation System to enhance ad Click-Through Rates (CTR) for Petal Ads using LLMs.
- Gained hands-on experience in Machine Learning and NLP.
- Enhanced problem-solving and teamwork skills in a professional R&D environment.

Student Teaching Assistant - FMV Işık University | 2023 October - 2025 January

As a Teaching Assistant in Computer/Software Engineering Department, I was tasked with:

- Helping students and answering their questions
- Supervised in the labs of the courses solving questions
- Making maintenance of Laboratory equipment

Skills

Computer

C , C++ , Shell , Git / Github,
Java , UML , OOP , Database Design,
Python , SQL , MIPS Assembly , MS Office

Language

English - (Upper-Intermediate Level)

Projects

E-COMREC - AI-Based Secure E-Commerce Solutions

- Developed an AI-powered e-commerce platform with microservices architecture (.NET Core, Python Flask, React). Implemented an SVD-based Recommendation System using Python Flask and a large dataset. Engineered an AI Chat Agent powered by LLM and RAG for semantic search and query answering. Integrated robust security protocols and utilized MSSQL for data management.

minishell - Custom Unix Shell Implementation

- Developed a custom Unix shell in C, mirroring Bash functionalities. Implemented command execution, I/O redirections (<, >, <<, >>), and pipes (|). Managed processes, file descriptors, and signals for robust operation. Included built-in commands like echo, cd, pwd, export, unset, env, and exit.
