Abdullah Ali GÜN

Software Engineer
Industrial Digital Transformation & AI

I develop innovative solutions across industrial digital transformation, automation, and artificial intelligence, bridging the gap between production and software. Using programming languages such as C# and Python, I focus on enhancing operational efficiency by designing automation, RPA, and data-driven applications within IoT-based systems. Recently, I have developed GenAI-based documentation, chatbot, and voice assistant integrations, bringing natural language understanding and intelligent automation capabilities into business processes. As part of my master's thesis, I am developing an AI-driven defect detection and quality control system for 3D printers, aiming to contribute to projects that prioritize digital transformation and sustainability.

Military Service: Paid
(December 2025)

Education

Kocaeli University

M.Sc. in Information Systems Engineering
2023 – Present
AI-Based Defect Detection, Quality Control, and Early Warning Systems in 3D Printers

Kocaeli University

Information Systems Engineering
2019 - 2023

Dil

English - B1
(Reading / Writing / Speaking)

Referanslar

Work Experience

Software Engineer
I-QANIK Yazılım (Kanık Group of Companies)
İzmit, Kocaeli August 2024 – Present

- Developing software solutions for group companies including ÖZKA Tire, İlka Plastik, IRC Automotive, Nart Security, and Palmiye Tire
- Leading a documentation management project powered by Generative AI
- Automating business processes and improving efficiency using Kofax RPA
- Managing integration projects between SAP and external applications
- Conducting process analysis and machine data collection in production facilities (SAP & Non-SAP environments)
- Developing analytical reports and integrating data sources using Power BI
- Supporting product development processes for external system integrations

Software Specialist
KordSA Teknik Tekstil A.Ş.
İzmit, Kocaeli — November 2021 – August 2024

- Researched emerging technologies and application areas, developing prototype solutions
- Developed mobile applications based on Augmented Reality (AR)
- Built Generative AI (GenAI)-based chatbot integrations and developed web APIs to connect workflows with voice assistants
- Designed Virtual Reality (VR) simulations within the scope of the TÜBİTAK 2209-B project
- Developed production system applications using SAP MII, SAP UI5, SAP HANA, and OPC technologies
- Contributed to the S/4 HANA migration process
- Created RPA solutions using Microsoft Power Automate to automate business processes
- Designed two-layer PCB circuits for hardware integration and prototyping

Software Engineering Intern
Kaitek Yazılım
Nilüfer, Bursa — June 2021 – August 2021

- Developed Mixed Reality (MR) applications on HoloLens 2 using Unity and UWP
- Customized and modified three.js-based 3D visualization libraries for enhanced interactivity and performance

Courses & Certifications

Microsoft Power BI Training
- Dijital Vizyon Academy
- November 2022

Microsoft Power Automate and Power Apps Training
- Dijital Vizyon Academy
- June 2022

Practical SQL
- BTK Academy
- November 2021

Volunteer Experience

Kocaeli University R&D and Innovation Club

Board President
January 2022 – June 2023

Board Member
October 2019 – January 2022

- Organized and led university–high school collaboration projects such as "Right Department, Happy Life", connecting students with suitable career paths.
- Coordinated the "My Department Mate Speaks" initiative, bringing together freshmen with alumni and senior students to strengthen academic networking.
- Managed technical teams focused on software development and innovation projects within the club.

Hobbies & Interests

- 3D Printing Projects
- Simulation and Computer Games
- Cats
- Emerging Technologies
- Photography

Projects

Autonomous Guided Vehicle (AGV)
Teknofest & Kocaeli University | January 2022 – July 2023

Participated in two different AGV projects within the scope of the Teknofest Industry Digital Technologies Competition.

- Root Rover Team (2023): Achieved 4th place in Turkey
- IMAGINEER Team (2022): Ranked 10th in Turkey
- Responsibilities: Software development in C#, C++, and Python, ground control interface design using Unity, cloud communication via .NET Core MVC, autonomous control programming on Raspberry Pi and Arduino, team leadership, and system integration.

TÜBİTAK 2209-B Virtual Reality OHS Simulation
KordSA & Kocaeli University | January 2022 – December 2022

- Recreated real factory accidents through VR simulations to enhance employee training and safety awareness.
- Developed 3D models in Blender and interactive VR scenes using Unity.
- Designed a Flutter-based remote control interface and an Azure cloud-based training tracking system.
- Enabled participation of 300 employees across 24 departments and 4 shifts, reducing training duration from 60 minutes to 2.5 minutes and achieving a measurable increase in safety awareness.

Classification of 3D Printing Defects Using Artificial Intelligence
Kocaeli University – Master's Thesis | 2023 – Present

- Collecting data from 3D printers using Go and Python and storing it in a PostgreSQL database.
- Performing data transformation, defect classification with Convolutional Neural Networks (CNN), and local detection using YOLO.
- Developing a management system in Go to send feedback commands and generate alerts for printers based on AI analysis.

Generative AI-Based Cloned Voice Detection
Kocaeli University – Master's Course Project | 2023

- Created a dataset using the YouTube API, combining "AI Cover" and real music samples.
- Implemented classification models using Multilayer Perceptron (MLP) and Convolutional Neural Networks (CNN).
- Developed an AI-based classification system to detect deepfake and cloned voice risks.

Skills

- **Programming & Software:** C#, .NET Core / Framework, Python, C++, SQL (MSSQL, HANA), HTML / CSS / JavaScript, Go
- **Data & Artificial Intelligence:** PyTorch, TensorFlow, Data Preprocessing, Machine Learning, Computer Vision (3D printer defect detection), YOLO
- **Industrial Systems:** SAP MII, SAP UI5, SAP HANA, S/4 HANA migration projects, OPC-based machine data collection
- **Automation & RPA:** Kofax RPA, Microsoft Power Automate, Power Apps
- **Simulation & XR Technologies:** Unity 3D/2D, VR / AR / MR application development, HoloLens
- **Hardware & Electronics:** PCB Design, Raspberry Pi, Arduino, IoT-based autonomous systems
- **Process & Project Management:** Process analysis, Digital transformation, Solution-oriented approach, Team leadership
- **Tools & Platforms:** Git, TFS, WSL (Linux), Power BI, Azure, GenAI tools such as ChatGPT / Gemini
