EDUCATION

Sabancı University — Fall 2019 – Fall 2024
Bsc. in Computers Science and Engineering . — **Istanbul, Turkey**
Goethe-Universität — Spring2024-Fall2024
Exchange Student — **Frankfurt, Germany**

About Me

Computer Science graduate from Sabancı University with expertise in C-family languages (C++, C#, Java) and Python. Developed machine learning models and enterprise-level database systems. TED Bodrum High School alumnus with strong analytical foundations. Passionate about backend development and data engineering, with disciplined teamwork skills from competitive sports.

RELEVANT COURSEWORK / SKILL

• C++, C#, Scheme, Python, Flex & Java • Data Visualization • System Modelling • Logic and Digital System Design • Database Management (SQL) • Mobile Programming (Android Studio) • Creative Coding • Computer Graphics (JavaScript) • Machine Learning • Computer Networks

Languages: Turkish (native), English (Upper Intermediate), Spanish (Beginner), German(Beginner)

PROJECTS

• Simulation of Vehicle — September – December 2021
Choose the electrical motor and design velocity controller via PWM and simulate it.

• Mobile application project — September – December 2022
Used Java Language and Web API's for Backend Programming and used Android Programming Frontend

• Database application — September – December 2022
Used MySQL for our database and did a cook shopping website.

• Transfer Learning for Gender Classification — March 2023 – June 2023
Applied transfer learning using the VGG-16 architecture to classify gender, achieving an accuracy rate of 87%.

• Online Music Analysis and Recommendation System — February 2023 – May 2023
Created an online system to gather liked-song data from multiple platforms, analyze musical preferences, and offer recommendations through Python backend development.

Solar System Simulation Enhancement using WebGL — December 2023
• Enhanced solar system simulation with a scene graph and illumination effects, deepening understanding of computer graphics principles including scene organization, lighting models, and 3D transformations.

•Mobile Application for Mental Health Improvement — January 2023 – December 2023
Developed an iOS application using Swift and Node.js with MongoDB, integrating gamification to

enhance user engagement and receiving positive feedback for its personalized mental health management features.

EXTRACURRICULAR

Fall 2019 - Present

- Member at Sabancı University Sail Club
- Member of Sabancı University Music Club
- Board member of Sabancı university New Comers Club

VOLUNTEER WORK

Civic Involvement Projects — Spring 2019

- Volunteering at to nearest primary schools to give lessons to children under Civic Involvement Project in Sabancı University

EXPERIENCE

Internship Experience

Coca-Cola — July 2023 – August 2023

Intern — **Istanbul, Turkey**

Developed automated SQL queries and scripts for data quality and integrity checks in supply chain planning software.
Utilized PgAdmin for SQL query development and documentation.
Collaborated with IT and business teams to align data checks with requirements.
Enhanced data accuracy and reduced manual verification needs.
