Summary

Except for the first attempt at Mizmer Holding as a PHP developer, I have started my career in Ibtech as an Intern software developer. During that period ı was coding in Java but in İTU we highly encouraged to code in C and C++. In senior grade, I have taken Computer Vision and Learning from Data. These approaches make me go into Python and Machine learning. I have gone deeper and wrote a paper which is 'Detecting Alzheimer on Morphological Connectivity Strength with Two New Graph Attention Methods: GrIS-Gat and TGCSA'. In this paper, me and my co-coder create two new methods for deep learning. In these methods, we used reinforcement learning, supervised, and unsupervised learning with 5-fold validation. Now ı am working ın Vakıfbank as Data Scientist, since my department needed, I am working to create my own Real-time Anomaly Detection algorithm. I would like to continue my career in the field of Data Science.

Experience

6 months

Title
Data Scientist

Company Name
Vakıfbank Ebis

City
İstanbul(Asya)

Company Sector
Banking

Starting Date
03.2020

Ending Date
Still Working

Job Type
Part Time

Job Definition
I am currently working in the system department of Vakıfbank. We are responsible from all Data of Vakıfbank. The main duty of our department is to tracing all data. In order to do that my co-workers have put some Static thresholds for as an alarm mechanism with SQL. But these kinds of static approaches become so costly for engineers and have very low accuracies. So my duty is create a new Learning mechanism that will put optimum thresholds and find Anomalies in the trend. And ı did it. I have created my own Unsupervised Time Series Anomaly Detection Algorithm. It is working with %99 accuracy even with unlabeled data. I have used Hierarchical clustering with single linkage. For more information, you can check my github. Nowadays ı am optimizing the project in order to integrate to our system.

Title
Software Engineer

Company Name
Ibtech Uluslararası Bilişim Ve İletişim Teknolojileri Ar-Ge, Danışmanlık, Destek San. Ve Tic. A.Ş.

City
İstanbul(Asya)

Company Sector
Software

Starting Date
06.2018

Ending Date
08.2018

Job Type
Intern

Job Definition
With Azure DevOps (Microsoft Tfs), I have analyze the codes for errors before they release. If their complexities are so high ı have chanced the codes and give a report to my team leader as a suggestion. I have prepared a paper which consists of Top 10 common error in the Tfs and gave it to my team. I have written Unit Tests for codes. In all process, ı observed Scrum and Agile technics in the working field.

Title
Software Engineer

Company Name
Mizmer Holding

City
İstanbul(Avr.)

Company Sector
Consultancy

Starting Date
01.2018

Ending Date
05.2018

Job Type
Intern

Job Definition
I have worked as a volunteer intern and coded PHP. This was the first experience of my professional career. We have created a nice website and algorithm which matches the troubled child with their optimum social environment in a school. I used Operational Research approaches and created my own algorithms during this period.

Education

Bachelor

Graduation Degree
2,5 / 4

University
Istanbul Technical University (ITU)

Faculty
Informatic and Computer Engineering Faculty

Department
Computer Engineering

Starting Date
09.2016

Ending Date
07.2020

Education Type
Formal Education

Education Language
English

High School

High School Name
Isıklar Air Force High School

UNSUPERVISED LEARNING USİNG CLUSTRING ANOMALY DETECTION PYTHON APP	**07.2020**	**https://github.com/AHMETZAFERSAGLIK/UNSUPERVISED-LEARNING-CLUSTRING-KUMELEME-ALGORITMALARI-KULLANARAK-ANOMALY-DETECTION-PYTHON-APP**

Project Description

I have created my own Unsupervised Time Series Anomaly Detection Algorithm. It is working with %99 accuracy even with unlabeled data. I have used Hierarchical clustering with single linkage. For more information, you can check my github. Nowadays ı am optimizing the project in order to integrate to our system.

Project Name
Detecting Alzheimer on Morphological Connectivity Strength with Two New Graph Attention Methods

Project Date
05.2020

Project URL
https://github.com/AHMETZAFERSAGLIK/Detecting-Alzheimer-on-Morphological-Connectivity-Strength-with-Two-New-Graph-Attention-Methods

Project Description
My Co-coder and me have created 2 new Deep Learning approach by using Graph-based Attention mechanisms from Brain signals and detect Alzheimer. As a result, we have increased the current approach accuracies with %10. We will publish our works as an academic paper at conferences.
